

Used oil...what should we do with it?

Option A:

Recycle used oil on site for heat recovery

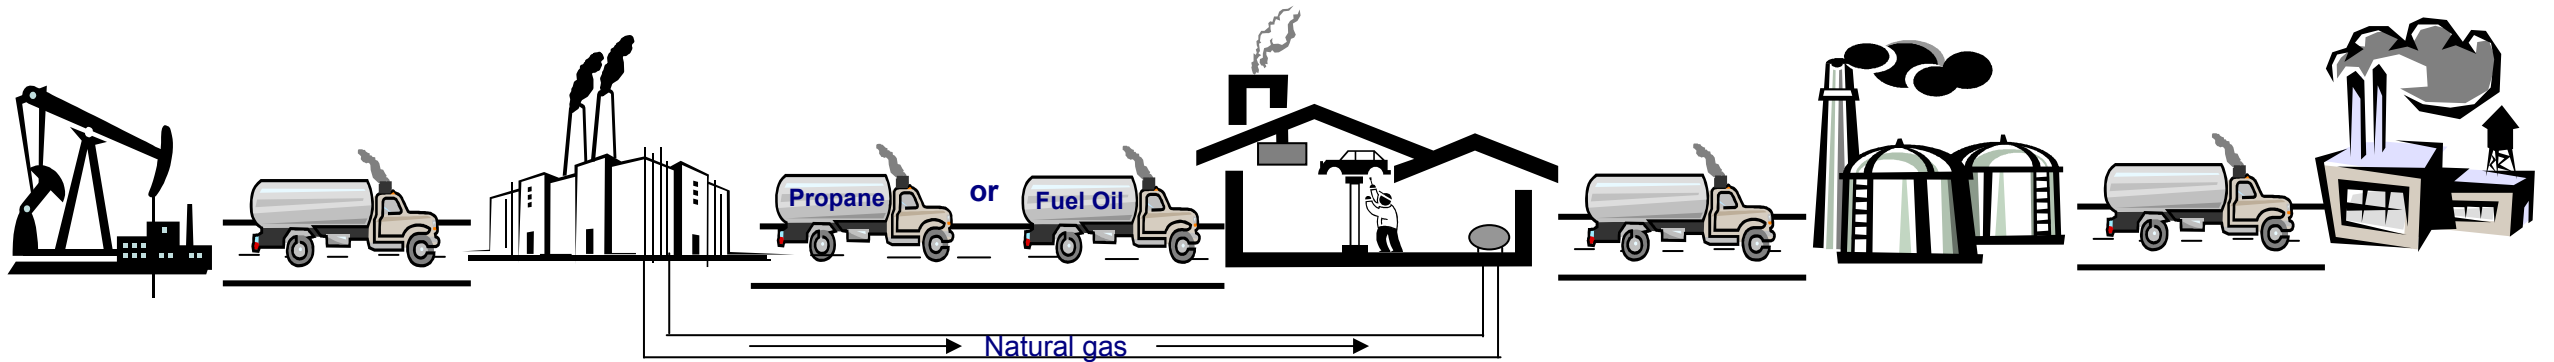

- No need for traditional heating fuel
- Eliminate emissions from transporting & re-refining

Option B:

Heat with traditional heating fuel and transport used oil off site

- Potential Spills
- Increased Emissions

Transport from traditional fuel rig to refinery. Transport traditional fuel from refinery to shop. Transport used oil from shop to tank farm/refinery. Transport used oil to industrial burner/lube stock plant.
